EDUCATION

University of Central Florida

Bachelor of Science in Computer Science (3.95 GPA)

Orlando, FL

Aug. 2025 – May 2028

RELEVANT COURSEWORK

Data Structures & Algorithms | Advanced Data Structures & Algorithms | Object-Oriented Programming | System Software | Web Development | Computer Architecture | Algorithms for Machine Learning

EXPERIENCE

Incoming Software Engineer Intern

August 2026 – Present

Limbitless Solutions

Undergraduate Research Assistant

August 2026 – Present

Shaojie Zhang Bioinformatics Lab

- Diagnosed and fixed correctness bugs in a **C++** implementation of the **Positional Burrows–Wheeler Transform (PBWT)** for genomic haplotype matching, validating output against ground-truth data across multiple match-length thresholds
- Currently developing algorithms to identify **long shared haplotype segments** across large genomic cohorts

Software Engineer Intern

May 2026 – July 2026

METIL: Institute for Simulations and Training

- Contributed to KCNSC** with a 3-person team, building a Unity application that converts webcam hand landmarks into gesture-based 3D model controls
- Implemented **real-time gesture recognition with MediaPipe**, driving a jitter-free camera rotation/zoom system in Unity (C#) for smooth live model manipulation

PROJECTS

Open Source Contributions | *C++, CUDA, TypeScript, Python, Go*

[GitHub](#)

- Fixed a cross-GPU CI flake in **NVIDIA RAFT**'s Lanczos eigensolver, rebuilding its tests around **property-based** eigenpair validity checks
- Resolved a security gap in **Kubernetes**' kubelet exec/run routes that let stale UUIDs resolve to the wrong pod
- Eliminated a file-descriptor leak in **PyTorch**'s elastic **c10d** rendezvous that exhausted the process's open-file limit

AutoBot | *Python, C++, CUDA, Isaac Sim, Docker*

[GitHub](#)

- Built an **NVIDIA Isaac Sim** robot control stack pairing an LLM-based task planner with **PPO**-trained skills and a fused **CUDA/C++** reward kernel for real-time policy training
- Distilled privileged-state policies into **CNN** vision policies, validated by an automated evaluation harness at **78% success** across **100 randomized** environment layouts

Remote Agent PC-Health Orchestrator | *Python, TypeScript/Next.js, Google ADK, Gemini, GCP*

[GitHub](#)

- Designed a multi-agent platform (**Google ADK, Gemini on Vertex AI**) where the **LLM itself routes** agent handoffs to diagnose telemetry and gate fixes through a three-layer **safety** policy
- Built and live-verified a remote-approval pipeline (**Cloud Run, Pub/Sub, Firestore**) with real-time streaming and **byte-for-byte rollback**, confirmed by an adversarial test that blocked a malicious kill-process proposal

VAST – Visual ASL Speech Translator | *Python, PyTorch, MediaPipe, OpenCV*

[GitHub](#)

- Led a **3-person team** to build a real-time ASL interpreter with a **4-layer PyTorch neural network** achieving **70%+ confidence** across **63 hand landmarks**
- Built a hand-tracking pipeline with **OpenCV** and **MediaPipe**, normalizing wrist-relative coordinates for accurate live-webcam sign detection

TECHNICAL SKILLS

Languages: Java, Python, C/C++, CUDA, TypeScript, JavaScript, HTML/CSS, C# (Unity), Go, Rust

Cloud & Infra: Google ADK, GCP (Cloud Run, Pub/Sub, Firestore), Docker, Kubernetes, Isaac Sim, Vercel, Anaconda

Libraries & Frameworks: PyTorch, TensorFlow, Scikit-learn, OpenCV, MediaPipe, NumPy, Pandas, Matplotlib, Seaborn, cuDNN, React, Node.js, Express, PostgreSQL, Redis
