

Steven Yodice-Smith

407-913-6050 | saysschool4321@gmail.com | www.linkedin.com/in/stevenyodice-smith | <https://github.com/says1117>

EDUCATION

University of Central Florida

Bachelor of Science in Computer Science (3.95 GPA)

Orlando, FL

Aug. 2025 – May 2028

Valencia College

Associate in Arts (4.0 GPA)

Orlando, FL

Aug. 2022 – May 2025

RELEVANT COURSEWORK

Data Structures & Algorithms | Advanced Data Structures & Algorithms | Object-Oriented Programming | System Software | Web Development | Computer Architecture | Algorithms for Machine Learning

EXPERIENCE

Software Engineer Intern

May 2026 – July 2026

METIL: Institute for Simulations and Training

- Contributed to **KCNSC** with a 3-person team, building a Unity application that converts webcam hand landmarks into gesture-based 3D model controls
- Implemented **real-time gesture recognition with MediaPipe**, detecting pinch and multi-hand poses to drive rotation, zoom, and explode/reset actions
- Built a **jitter-free camera rotation and zoom system in Unity (C#)** that translates live gesture data into smooth model manipulation

PROJECTS

Open Source Contributions | C++, CUDA, TypeScript, Python, Go

[GitHub](#)

- Fixed a cross-GPU CI flake in **NVIDIA RAFT**'s Lanczos eigensolver, rebuilding its tests around **property-based** eigenpair validity checks
- Resolved a security gap in **Kubernetes**' kubelet **exec/run** routes that let stale UIDs resolve to the wrong pod
- Eliminated a file-descriptor leak in **PyTorch**'s elastic **c10d** rendezvous that exhausted the process's open-file limit
- Corrected a **Node.js Buffer API** compatibility bug across **7 encoding methods** in Cloudflare's **workerd** runtime

HEAL | Rust, Python, PyTorch, TypeScript, React, Kubernetes

- Built **Rust** EHR backend with **delta-state CRDTs** and **gossip sync**, achieving **100% write availability** through simulated network partitions
- Trained calibrated **PyTorch** model for patient readmission risk and lab-trend drift detection on synthetic data
- Built **RAG** clinical assistant with patient-isolated retrieval and cited, hallucination-resistant responses
- Connected **React** frontend to **5 microservices** via a **TypeScript/Fastify** gateway, deployed on **Kubernetes**

VAST - Visual ASL Speech Translator | Python, PyTorch, MediaPipe, OpenCV

[GitHub](#)

- Led **3-person team** to build real-time ASL interpreter with **4-layer PyTorch neural network** achieving **70%+ confidence** on **63 hand landmarks**
- Developed hand tracking pipeline with OpenCV and MediaPipe, normalizing wrist-relative coordinates for accurate live webcam sign detection
- Integrated **Google Gemini 2.5 Flash** for AI-assisted word reconstruction and **ElevenLabs TTS API** for natural speech output with threaded audio playback
- Implemented **20-frame debouncing system** to stabilize gesture input, enabling reliable word-building and single-letter vocalization modes

TECHNICAL SKILLS

Languages: Java, Python, C/C++, TypeScript, JavaScript, HTML/CSS, C# (Unity), Go, Rust

Developer Tools: Git/GitHub, VS Code, Docker, Kubernetes, Clion, PyCharm, IntelliJ, Vercel, Anaconda

Libraries & Frameworks: React, Node.js, Express, Socket.io, PostgreSQL, Redis, Pynput, Pycairo, PyTorch, Scikit-learn, OpenCV, MediaPipe, NumPy, Pandas, Matplotlib, TensorFlow, Seaborn
